

The zip file contains 3 files.

- 1)Angular_HW3 :- Contains angular application code
- 2)Springboot_backend: Contains Springboot code
- 3) 642_Report: Report

Steps to run the application:

Install Node.js,npm and angular cli.

Install STS IDE

1)Import the folder Angular_HW3 in any IDE.

2) Import the Springboot_backend project in STS IDE. Run the SpringbootBackendApplication.java file:- Click on run as -> springBoot application.

Once this is done the springboot should be running on localhost:8080

3)now hit ng serve and build the angular application. The application will now be running on localhost:4200

Thank you.
